Scan QR codes with the camera app

System: iOS 11
Level: A
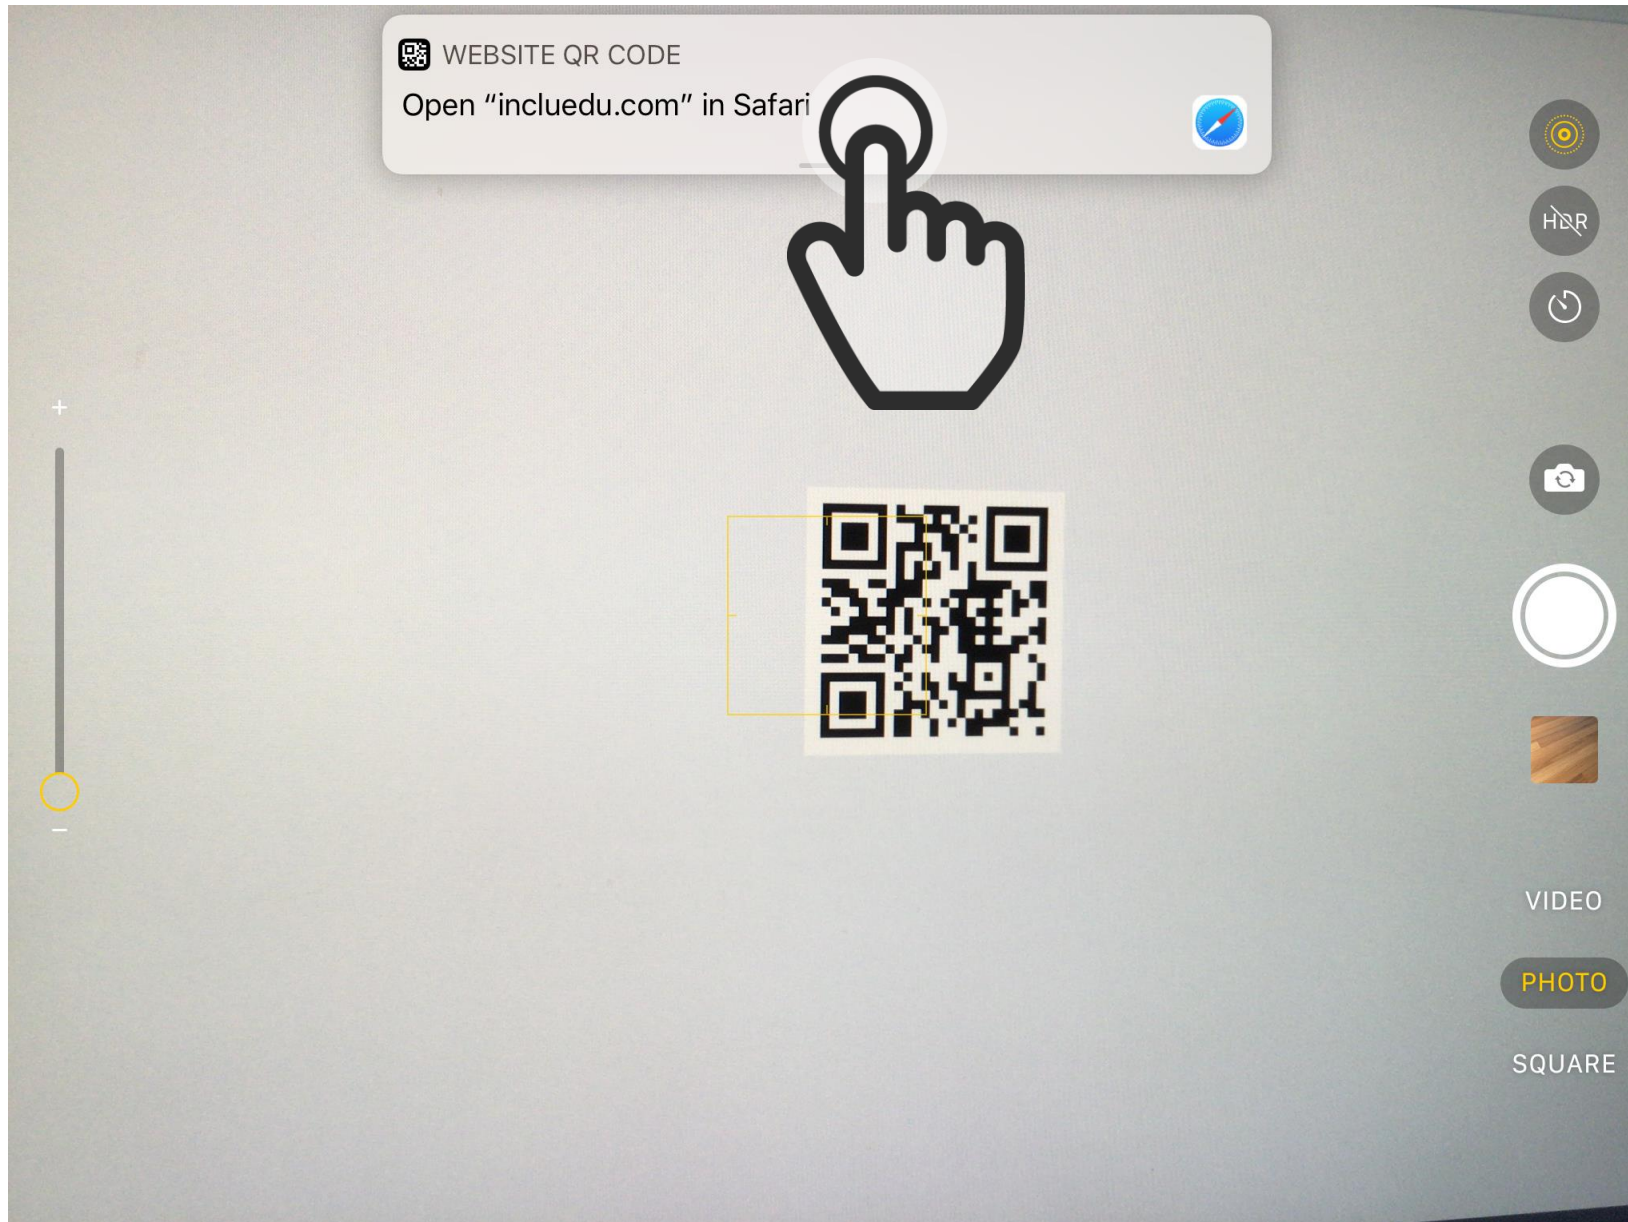

One new feature of iOs11 is that you can now scan QR codes with the camera app.

To do that, open the camera app by tapping on the icon.

Step 2

Once the camera app is open, point it at a QR code and a popup should open at the top which you can click.

In this case it is a link to a webpage.

This will bring you straight to the website in your browser.
